2.JAVA

3.JAVA

4. How would you write a query so that you only got back the 3 highest paid employees in an employee table?

#MySQL and MS SQL Server

SELECT TOP 3 salary FROM employee

ORDER BY salary DESC;

ORACLE #2

SELECT salary from employee

ORDER BY salary DESC

FETCH NEXT 3 ROWS ONLY;

5. what is ACID compliance?

ACID is set of properties of database transactions.

A: Atomicity: transactions either happen or does not happen

C: Consistency: data is consistent before and after transactions

I: Isolation: multiple transactions can happen concurrently without reading the wrong data

D: Durability: transactional success is robust to system failure which means completed transactions survives permanently even in case of system failure.
