1.what are joins and what are unions in SQL?

Joins allow to select data(rows) from two or more tables

Union is a set operator that returns all rows from both queries and eliminates all duplicate values.

2.How can we fetch duplicate records from a table?

SELECT column1,column2, COUNT(*) FROM table

GROUP BY column1,column2

HAVING COUNT(*) > 1

3.How would you find and delete duplicate rows in Oracle SQL?

DELETE FROM table

WHERE

Column1 NOT IN (

SELECT  MAX(column)

FROM table

GROUP BY column1,column2

);

4. I used MYSQL to create the required database for my capstone project. SQL is Structured Query Language that used for interacting with database and allows to manipulate the data in database and its objects such as tables, views, procedures, and triggers.
