2.Given an array [3,6,7,9] how would you sort the elements?

Python:

Use sort methond

List_name =   = [3,6,7,9]

List_name.sort()

3.Given a Text file with IP addresses formatted as xxx.xxx.xx how would you read through the file and how many times each unique IP address appears? What data structure would you use to store the address and the count?

Linux:

uniq -c filename.txt | awk '{print $2": "$1}'
