1.what commands can be used to remove folders and files in Unix?

Rm -r file or directory name

Rmdir -r file or directory name

2.Do you know about Hadoop and its ecosystem? Explain a part of the ecosystem in detail.

Apache Hadoop is an open-source framework intended to make interaction with big data easier.

Big data is all about a term given to the data sets which can't be processed in an efficient manner with the help of traditional methodology such as RDBMS.

Apache HBase as a part of Hadoop ecosystem: It's a NoSQL database which supports all kinds of data and thus capable of handling anything of Hadoop Database. It provides capabilities of Google's Bigtable, thus able to work on Big Data sets effectively.
